Field Description	Field Abbreviation	Field Length	Field Type	Field Version
Aggregate offshore region of provision	**XREGAG01**	**4**	**Char**	**2.4.1**

VALID ENTRIES

XL	Guernsey and Jersey
IM	Isle of Man
GREU	Geographic region - Other European Union
GRAF	Geographic region - Africa
GRAS	Geographic region - Asia
GRAU	Geographic region - Australasia
GRME	Geographic region - Middle East
GRNA	Geographic region - North America
GROE	Geographic region - Other Europe
GRSA	Geographic region - South America

ADDITIONAL INFORMATION

This field groups the country of provision entries from the Aggregate offshore collection (Cyy052) to regions in a manner consistent with the Student collection's domicile derived fields.

The valid entries for this field are created from an overseas lookup table, provided by Data Management, which includes all the valid country entries in the column F_DOMICILE_ISO. (The Aggregate offshore collection country entries are a subset of the Student collection DOMICILE entries.)

Entry XL is the National Statistics County Classification (NSCC) code for Channel Islands not otherwise specified, but is used in this field to label Guernsey and Jersey. Guernsey and Jersey in this context refer to the Bailiwicks of Guernsey and Jersey, which includes their smaller islands. Guernsey and Jersey includes Channel Islands not otherwise specified.

(Note: GROO Geographic region - Non-European Union unknown cannot be derived in XREGAG01 and is not included in the valid entries. In the Student collection's domicile derived fields (XDOMGR01 and XDOMREG01) GROO is derived from Cyy051.DOMICILE code ZZ where Cyy051.FEEELIG (Fee eligibility) is 2. Neither COUNTRY code ZZ nor FEEELIG are included in Cyy052).

DEPENDENT FIELDS

none

TECHNICAL SPECIFICATION

The table T_OVERSEAS_LOOKUP_V8 consists of 3 columns:
Country of domicile (F_DOMICILE, VARCHAR2, 4); Region of domicile (F_REGION, VARCHAR2, 4) and ISO Country of domicile (F_DOMICILE_ISO, VARCHAR2, 2). This table has been supplied in an Oracle table provided by Data Management.

Where the COUNTRY value is found in the F_DOMICILE_ISO column of T_OVERSEAS_LOOKUP_V8, then return F_REGION as XREGAG01.

Where the COUNTRY is not found in the F_DOMICILE_ISO column of T_OVERSEAS_LOOKUP_V8, then return Null as XREGAG01, which will be reproduced in XREGAG01. This is an error, highlighting that a value in the collection's COUNTRY field is not contained in the F_DOMICILE_ISO column of T_OVERSEAS_LOOKUP_V8. (This is designed so the derived function does not fail. Nulls are to be identified at impossible values testing to flag the issue to HESA's Data Management team.)

Cyy052 Provision.COUNTRY (2 CHAR)	**XREGAG01**
Found in T_OVERSEAS_LOOKUP_V8. F_DOMICILE_ISO	T_OVERSEAS_LOOKUP_V8.F_REGION
Not found in T_OVERSEAS_LOOKUP_V8. F_DOMICILE_ISO	Null

Revision 2.3.1 2013-02-18 (Text added further clarifying the meaning of Guernsey and Jersey to Additional Information. Second row added to the Technical Specification 'TEMP' table: where the COUNTRY value is not found in T_OVERSEAS_LOOKUP_V6.F_DOMICILE_ISO, return Null as XREGAG01 as an error - rather than allowing the function to fail.)

Revision 2.4.1 2013-10-31 (Technical specification revised to remove the TEMP processing stage, which is no longer required with the complete move of the source data tables to ISO-3166-1 and the consequent removal of old-style HESA country codes in T_OVERSEAS_LOOKUP_V8 for F_REGION. T_OVERSEAS_LOOKUP_V6 updated to T_OVERSEAS_LOOKUP_V8 to reflect the move to ISO-3166-1 codes in F_REGION and Croatia joining the EU, consequently deriving to GREU in F_REGION.)
