## ADDITIONAL INFORMATION

XJACSLEV201 is based on the UNISTATS level 2 groupings, adopted in HESA's Data Quality Assurance and Analytical Services teams' UNISTATS specifications - as informed by HEFCE's requirements.

This field maps XJACS01 (held on the Cyy051\_SJ table) to the three Unistats groupings via a lookup table supplied by HESA's Data Management team in Oracle, as described in the technical specification.

The valid entries used in XJACS01 are as per Course.Subject.SBJCA field in the relevant collection year HESA Student record coding manual.

From 2012/13 the underlying JACS subject coding frame adopted the JACS3 subject codes.

## TECHNICAL SPECIFICATION

The table static\_data.XJACSLEV\_lookup\_V2 consists of four columns: F\_XJACS01 (CHAR 4); F\_XJACSLEV1 (CHAR 1); F\_XJACSLEV2 (CHAR 2); F\_XJACSLEV3 (CHAR 3).

1. If a Student teacher training course identifier (Course.TTCID) is submitted and coded 1 'On initial or pre-service teacher training course leading to Qualified Teacher Status or to registration as a school teacher with the General Teaching Council for Scotland'; 2 'On other initial teacher training course not leading to Qualified Teacher Status nor to registration as a school teacher with the General Teaching Council for Scotland'; 8 'NCTL funded flexible provision (ITT)'; G 'School Direct initiative (mainstream)'; H 'School Direct initiative (flexible)'; L 'School Direct Training Programme (self-funded)'; M 'School Direct Training Programme (self-funded - flexible)'; N 'School Direct Training Programme (salaried)'; or P 'School Direct Training Programme (salaried - flexible)' then XJACSLEV201 is coded 42 'Initial teacher training', irrespective of the XJACS01 code derived for that instance.

2. If Course.TTCID is not 1, 2, 8, G, H, L, M, N or P, lookup XJACS01 in XJACSLEV\_lookup\_V2.F\_XJACS01 and return a value from F\_XJACSLEV2 for this field.

3. Where XJACS01 is not found in XJACSLEV\_lookup\_V2.F\_XJACS01, return Null. This is an error, highlighting that a value is not a valid entry in the lookup table. (This is designed so the derived function does not fail. **Nulls are to be identified at impossible values testing** to flag the issue to HESA's Data Management team.)

**(Note to developers:** This specification is hierarchical. Complete top down.)
